PROFESSIONAL SUMMARY

Analytical and detail-driven Data Analyst with a strong engineering foundation in exploratory data analysis, relational database querying, and dashboard automation. Proficient in Python (Pandas, NumPy, Matplotlib, Seaborn), SQL/MySQL, Power BI, Tableau, and Advanced Microsoft Excel. Experienced in structuring raw transactional data into optimized star schemas, developing DAX calculated measures, and building intuitive KPI reports that translate complex datasets into actionable business intelligence.

TECHNICAL SKILLS

Programming & Analytics:	Python (Pandas, NumPy, Matplotlib, Seaborn), SQL, Exploratory Data Analysis (EDA)
Database Management:	MySQL, Relational Data Modeling, Schema Design, Complex Joins, Subqueries, Aggregations
BI & Data Visualization:	Power BI (DAX, Power Query, Star Schema), Tableau Desktop, Interactive Dashboards, KPI Tracking
Spreadsheet Analytics:	Advanced Excel (XLOOKUP, VLOOKUP, Pivot Tables & Charts, Conditional Formatting, Data Cleaning)
Tools & Core Concepts:	Git, GitHub, VS Code, Postman, MS Office, ETL Workflows, Statistical Analysis, Problem Solving

TECHNICAL & ANALYTICAL PROJECTS

Sales Performance & Customer Insights Dashboard — **Power BI, MySQL, Advanced Excel, DAX**

- Engineered an interactive 2-page Power BI dashboard modeling 50,000+ retail records across geographic regions and product categories.
- Developed custom DAX measures (Total Revenue, Gross Profit Margin %, and MoM Sales Growth %) using time-intelligence functions.
- Built an automated star schema linking transactional fact tables with dedicated calendar and customer dimension tables for optimized query speeds.
- Isolated regional margin variances and customer churn indicators, uncovering actionable insights for inventory and discounting optimization.

E-Commerce Customer Segmentation & Churn Analysis — **Python (Pandas, Seaborn), Tableau, SQL**

- Executed complete exploratory data analysis (EDA) on raw consumer transaction logs using Python, handling null values and outlier cleansing.
- Formulated an RFM (Recency, Frequency, Monetary) segmentation model using Pandas quantile scoring to identify high-value retention targets.
- Generated visual correlation matrices and spending distribution heatmaps to evaluate repeat purchasing cycles across customer cohorts.
- Created an executive Tableau dashboard with interactive treemaps and scatter plots, classifying 25% of lapsed repeat buyers as key re-engagement candidates.

Healthcare Operations & Patient Wait-Time Optimization Dashboard — **MySQL, Tableau, Advanced Excel, Python**

- Aggregated and cleansed 25,000+ clinical visit encounters using MySQL queries to analyze department-wise bed occupancy and admission volume.
- Constructed advanced SQL scripts utilizing timestamp arithmetic (TIMESTAMPDIFF) and window aggregations to measure triage wait times across shifts.
- Designed a Tableau operational heatmap visualizing peak arrival hours (11:00 AM – 2:00 PM) versus active physician coverage.
- Conducted staffing-gap simulation in Excel using percentile formulas, demonstrating that a schedule adjustment reduces peak queue delays by 22%.

EDUCATIONAL QUALIFICATION

Prathyusha Engineering College — Bachelor of Engineering (B.E.) in Computer Science & Engineering **2022 – 2026** | **CGPA: 83%**

Sri Chaitanya Junior College — Intermediate (Class XII) — MPC **2020 – 2022** | **CGPA: 85%**

ZP High School — Secondary School Certificate (SSC — Class X) **2019 – 2020** | **CGPA: 98%**
